Finance

Financial Reporting & Performance Management

An advisory offering that gives leaders consistent KPIs, trusted dashboards and a faster, repeatable month-end reporting process.

Category	Typical duration	Delivery model
Finance Advisory: Measure Stage (understanding how the organization is performing)	2 to 5 weeks per module; 8 to 12 weeks for a full reporting redesign	On-site, Hybrid, Workshop-based

Client need

Executives often get financial information that is late, fragmented or too detailed to act on, with each key performance indicator (KPI) calculated differently. It sits in the Measure stage of Cleveland Clinic's five-stage finance advisory lifecycle: understanding how the organization is performing ("How are we performing?").

Questions we help you answer

- Can our leaders trust the numbers they see each month?
- Which KPIs should we track, and how should each one be defined?
- How do we make month-end reporting faster and less dependent on a few people?

What you receive

Start with one module or redesign them all:

- **KPI framework and dictionary:** definition, formula, owner and cadence for each KPI
- **Dashboard design:** audience map and an executive dashboard prototype
- **Reporting package and procedures:** month-end and board templates with commentary
- **System assessment and AI roadmap:** optimization and prioritized AI-enabled use cases

How it works

1. **Assessment (about 2 weeks):** reports, KPIs, systems and interviews
2. **Design and build (5 to 8 weeks):** workshops and weekly build reviews
3. **Handover (1 to 2 weeks):** training, documentation and governance

Timing shown is for a full redesign; a single module takes 2 to 5 weeks.

Expected outcomes

- ✓ One agreed definition and owner for every KPI
- ✓ A consistent monthly package that explains results, produced faster
- ✓ A governed path to AI-enabled reporting
