Finance

Integrated Financial Planning, Forecasting & Modeling

An advisory offering that helps finance teams build driver-based plans, budgets and forecasts that connect volumes, staffing, revenue and capital.

Category	Typical duration	Delivery model
Finance Advisory: Manage Stage (planning, budgeting and forecasting with confidence)	2 to 12 weeks per module; 12 to 20 weeks for the full toolkit	Hybrid, Workshop-based

Client need

Volume assumptions drive nearly every plan, yet many organizations plan with one-off spreadsheets and budgets disconnected from operations. It sits in the Manage stage of Cleveland Clinic's five-stage finance advisory lifecycle: planning, budgeting and forecasting with confidence ("How do we improve planning and decision-making?").

Questions we help you answer

- Is our plan affordable, and how does it change if volumes change?
- How do staffing, revenue and capital connect to our volume forecast?
- How do we shorten the budget cycle and forecast with confidence?

What you receive

Excel-based modules that together form one planning toolkit:

- **Volume, revenue and staffing models:** by service line, including ramp-up, payer mix and headcount
- **Three-statement model:** profit and loss, cash flow and balance sheet with scenario toggles
- **Scenario package:** best, base and downside cases with break-even analysis
- **Budget, forecast and capital plan:** budget process, 3 to 10 year forecast and capital priorities

How it works

1. **Design (2 to 3 weeks):** structure, drivers and assumptions agreed
2. **Build and review (8 to 14 weeks):** volume and revenue first, reviewed weekly
3. **Handover (2 to 3 weeks):** validation, training and documentation

Timing shown is for the full toolkit; a single module takes 2 to 12 weeks.

Expected outcomes

- ✓ One shared model tying staffing, revenue and capital to volume
- ✓ Quick scenario testing and a shorter budget cycle
- ✓ Models the finance team maintains after handover
