Safety, Quality, and Patient Experience (SQPE)

SQPE Organizational Maturity Assessment

See where your organization stands on performance improvement, patient experience and safety culture, and how your view compares with Cleveland Clinic's.

Category	Typical duration	Delivery model
Clinical Advisory	Set at scoping; repeatable annually	Hybrid

Client need

Leaders often hold different views of how mature their organization is in performance improvement, patient experience and safety culture. Without a shared, structured scale, it is hard to agree on priorities or to track progress over time.

This offering is typically requested by executive and quality leaders preparing improvement strategies, or as part of the annual SQPE cycle of a Cleveland Clinic Connected membership.

Questions we help you answer

- How mature are our improvement, patient experience and safety culture practices today?
- Does our leaders' view match an outside assessment?
- Where should we focus first?

What you receive

- PI maturity scale: member self-assessment and Cleveland Clinic assessment
- PE maturity scale: member self-assessment and Cleveland Clinic assessment
- HRO and Safety Culture maturity scale: member self-assessment and Cleveland Clinic assessment
- Comparison report highlighting gaps between the two assessments
- Prioritized recommendations to advance maturity

How it works

Member leaders complete the self-assessment for each scale. The Cleveland Clinic SQPE team conducts its own assessment, then reviews the comparison with leadership and agrees on priorities.

Timing depends on how many of the three scales are in scope and when leaders complete the self-assessment. The assessment can be repeated each year to track progress, aligned with the annual SQPE assessment in the core program.

Expected outcomes

- ✓ A shared, evidence-based view of organizational maturity
- ✓ Alignment between leadership perception and independent assessment
- ✓ Clear priorities for advancing PI, PE and safety culture
- ✓ A baseline for measuring maturity gains year over year
