Cleveland Clinic

INTERNATIONAL & EMERGING MARKETS | ADVISORY OFFERING PROFILE

Financial Reporting & Performance Management

An advisory offering that gives leaders consistent KPIs, trusted dashboards and a faster, repeatable month-end reporting process.

CATEGORY
Finance Advisory: Measure Stage (understanding how the organization is performing)

TYPICAL DURATION
2 to 5 weeks per module; 8 to 12 weeks for a full reporting redesign

DELIVERY MODEL
On-site, Hybrid, Workshop-based

01 CLIENT NEED

Executives frequently receive financial information that is late, fragmented across systems or too detailed to act on. Without agreed definitions, the same key performance indicator (KPI) is calculated differently across hospitals and departments, dashboards built by different teams conflict, and month-end reporting depends on manual workarounds and the knowledge of a few individuals. Leadership needs consistent measures, a clear performance story each period and a realistic path to automation.

This offering sits in the Measure stage of the Cleveland Clinic Healthcare Financial Advisory Lifecycle, which follows an organization's financial decisions through five stages: Plan, Measure, Optimize, Manage and Transform. The Measure stage covers understanding how the organization is performing financially and why, and answers the client question "How are we performing?" It is typically requested by growing organizations and those with limited reporting capabilities or multiple, disconnected data sources.

02 CLEVELAND CLINIC VALUE PROPOSITION

This offering is delivered by Cleveland Clinic's Finance Advisory team. Cleveland Clinic is an operating health system with 23 hospitals, 300 outpatient locations and about 83,000 caregivers, and has grown from Northeast Ohio into Florida, Las Vegas, Toronto, London and Abu Dhabi (figures as of December 31, 2025).

Clients get reporting designed by a team that draws on how Cleveland Clinic reports, governs and manages performance across a complex, multi-entity enterprise. KPI definitions, dashboards and

month-end processes are adapted to the client's systems, maturity and regulatory context rather than copied from a template.

Procedures are documented and the client's reporting team is trained before handover, so results are sustained after the engagement ends.

03 KEY DELIVERABLES

Clients can start with a single module, such as the KPI framework, dashboard design or reporting package. A full reporting redesign includes all of the deliverables below.

- **KPI framework and dictionary:** the agreed set of KPIs, each with a definition, formula, owner and review cadence
- **Dashboard design:** audience map, data definitions and a working prototype of the executive dashboard
- **Management reporting package:** standard month-end and board reporting templates, with a production timeline and responsibilities
- **Variance commentary framework:** a standard approach and templates for explaining results against budget and prior periods
- **Reporting procedures:** an inventory of required reports and standard operating procedures for producing the key reports
- **Reporting system assessment:** review of current tools, with optimization recommendations and a future-state architecture
- **AI-enabled reporting roadmap:** prioritized use cases, a data readiness review and the design for a first pilot
- **Governance and rollout plan:** ownership, change control and a phased implementation roadmap

04 DELIVERY MODEL

On-site / Hybrid / Workshop-based

Delivered by Cleveland Clinic's Finance Advisory team, working alongside the client's finance and reporting leads. The engagement begins with a review of current reports, systems and processes and interviews with finance and operational leaders. Design workshops agree the future state, followed by iterative build and review in weekly working sessions. It closes with training and handover so the client team can run the new approach.

05 TYPICAL DURATION

2 to 5 weeks per module; 8 to 12 weeks for a full reporting redesign

- **Current-state assessment (about 2 weeks):** Review of current reports, KPIs, systems and processes, with leader interviews
- **Design and build (5 to 8 weeks):** Workshops to agree the future state, then iterative build and review of KPIs, dashboards, reports and procedures
- **Handover and adoption (1 to 2 weeks):** Training, documentation and a governance plan so the client's team can run the new approach

Phase timing above is for a full reporting redesign. A single module follows the same three phases in 2 to 5 weeks. The range depends mainly on the number of entities and reports in scope, the number of source systems and how consistent existing definitions are.

06 RESOURCE REQUIREMENTS

CLEVELAND CLINIC TEAM

- Director / Executive Sponsor: 5 to 10% (larger engagements)
- Assistant Director / Engagement Lead: 10 to 25%
- Manager / Workstream Lead: 20 to 40% (mid-sized and larger engagements)
- Senior Analyst: 30 to 60%
- Analyst: 20 to 50%
- Admin / Project Support: up to 10%

CLIENT TEAM

- Executive sponsor with decision authority, for scoping, key reviews and the final readout
- Finance or reporting lead as day-to-day point of contact, attending the weekly working sessions
- Report owners and dashboard users across finance and operations for interviews and design workshops
- IT, reporting or business intelligence team for system access and extracts

Percentages are the share of each team member's working time during the engagement, so they do not add up to 100%. Roles marked for larger engagements join only when the scope calls for them.

ENGAGEMENT ASSUMPTIONS

- The client provides timely access to the financial, operational, market, volume, stakeholder, reporting and staffing information in the data request
- Scope and timing may change if data is late or incomplete
- The modules in scope are confirmed at scoping
- Stakeholders are available for interviews and working sessions, and draft deliverables are reviewed within an agreed turnaround
- Recommendations are advisory; decisions and implementation remain with the client's leadership

07 EXPECTED OUTCOMES

- Every KPI has one agreed definition and owner, so results are comparable across hospitals and departments
- Executives receive a consistent reporting package each month, with commentary that explains what changed and why
- Month-end reporting is faster, repeatable and no longer depends on a few individuals
- Dashboards built by different teams tell the same story from the same definitions
- The organization has a governed, prioritized path to automated and AI-enabled reporting
- The client's reporting team runs and maintains the new approach after handover, using the documented procedures and training provided
