Financial Reporting & Performance Management

Design of the KPIs, dashboards and management reporting leaders rely on, backed by documented procedures, optimized systems and a governed path to AI-enabled reporting.

CATEGORY	TYPICAL DURATION	DELIVERY MODEL	PRODUCT OWNER
Finance Advisory: Measure Phase	2 to 5 weeks per module; 8 to 12 weeks for a full reporting redesign	On-site, Hybrid, Workshop-based	IEM Finance Advisory Connected & Advisory Services

01 CLIENT NEED

Executives frequently receive financial information that is late, fragmented across systems or too detailed to act on. Without agreed definitions, the same KPI is calculated differently across hospitals and departments, dashboards built by different teams conflict, and month-end reporting depends on manual workarounds and the knowledge of a few individuals. Leadership needs consistent measures, a clear performance story each period and a realistic path to automation.

The offering sits within the Measure phase of the Cleveland Clinic Healthcare Financial Advisory Lifecycle, which answers the client question "How are we performing?" It is typically requested by growing organizations and those with limited reporting capabilities or multiple, disconnected data sources.

02 CLEVELAND CLINIC VALUE PROPOSITION

Cleveland Clinic reports, governs and manages performance across a complex, multi-entity enterprise and understands what it takes to build reporting that leaders trust. Our advisors bring practical, tested approaches to KPI governance, dashboards, management and month-end reporting, and reporting systems.

Clients receive frameworks built by practitioners who use similar tools every day, adapted to the client's systems, maturity and regulatory context, with an emphasis on governance that sustains results after the engagement ends.

03 KEY DELIVERABLES

- Enterprise KPI framework and KPI dictionary with definitions, formulas, owners and review cadence
- Dashboard ecosystem design with audience mapping, executive dashboard prototype and data definitions
- Standardized management and month-end reporting package, including board reporting templates
- Variance commentary framework and production timeline with responsibilities
- Reporting requirements inventory and standard operating procedures for key reports
- Reporting system assessment with optimization recommendations and future-state architecture
- AI-enabled reporting roadmap with prioritized use cases, data readiness review and pilot design
- Governance, rollout and implementation roadmap

04 DELIVERY MODEL

On-site / Hybrid / Workshop-based

The engagement begins with a review of current reports, systems and processes and interviews with finance and operational leaders. Design workshops are used to agree the future state, followed by iterative build and review of deliverables. It closes with handover and guidance so the client team can sustain the new approach.

05 TYPICAL DURATION

2 to 5 weeks per module; 8 to 12 weeks for a full reporting redesign

Typically delivered in three phases: current-state assessment; future-state design and build; handover and adoption support. A focused KPI, dashboard or reporting package module runs 2 to 5 weeks; an enterprise-wide redesign covering KPIs, dashboards, month-end reporting, SOPs and systems runs 8 to 12 weeks. Final timing depends on data availability and scope.

06 RESOURCE REQUIREMENTS

07 EXPECTED OUTCOMES

- Single, agreed definition and clear owner for each KPI, comparable across the enterprise
- Coherent, trusted set of dashboards built around the measures that drive decisions
- Faster, consistent month-end reporting with variance commentary that explains performance
- Documented, repeatable reporting processes with reduced key-person dependency
- Better use of existing reporting systems and a governed path to AI-enabled reporting

- Improved visibility into financial and operational performance
