Finance

Strategic Finance & Growth Advisory

An advisory offering that helps healthcare leaders decide which growth investments to pursue, and how to fund and sequence them.

Category	Typical duration	Delivery model
Finance Advisory: Plan Stage (deciding whether and how to invest)	4 to 12 weeks	Hybrid, Workshop-based

Client need

New facilities, service lines and market entries compete for limited capital and are often advanced on enthusiasm rather than a clear financial picture. It sits in the Plan stage of Cleveland Clinic's five-stage finance advisory lifecycle: deciding whether and how to invest ("Can we do this?").

Questions we help you answer

- Is this facility, service line or market entry financially viable?
- Which growth opportunities should we pursue first?
- How should we fund and sequence the plan over the next several years?

What you receive

Modules are selected at scoping:

- **Market and feasibility assessment:** demand model by service, viability, risks and success conditions
- **Business case and pro forma:** multi-year model of return and net present value in three scenarios
- **Prioritization and roadmap:** opportunities ranked on agreed criteria and a phased, funded plan
- **Executive presentation:** findings and a go or no-go recommendation for the board

How it works

1. **Discovery (1 to 2 weeks):** data request, interviews and options to test
2. **Analysis and modeling (2 to 8 weeks):** models reviewed in weekly sessions
3. **Validation and readout (1 to 2 weeks):** findings tested, presented and handed over

Expected outcomes

- ✓ Leadership knows which opportunities are viable before committing capital
- ✓ The board decides with validated data and documented assumptions
- ✓ An approved, funded plan and models the finance team can update
