Digital Tools & Analytics

Data, Analytics & Business Intelligence Advisory

Focused coaching to build a defensible measure set, trusted metric definitions and the data foundations leaders need to run the hospital.

Category	Typical duration	Delivery model
Digital & Technology Advisory	About 6 months	Virtual

Client need

Hospitals often start with hundreds of candidate indicators but no focused first-year measure set, certified definitions, data governance or clear analytics architecture. Requests typically follow a new opening, accreditation goals such as JCI, or conflicting numbers across teams.

Questions we help you answer

- Which measures should our leaders track in the first year?
- How do we make sure everyone calculates them the same way?
- What data governance, architecture and analytics team do we need?

What you receive

- Virtual advisory session series (typically up to six sessions)
- Tiered measure set recommendations (pre-opening, first year, full operations)
- Certified metric definitions, ownership and versioning guidance
- Minimum viable data governance structure
- Architecture, integration and analytics team design guidance
- Written feedback on client drafts, with session notes and action items

How it works

Six 60-minute virtual coaching sessions about every 3 to 4 weeks, led by Cleveland Clinic analytics leaders, with one round of light written review. International & Emerging Markets schedules sessions and issues notes.

Expected outcomes

- ✓ A focused, defensible first-year measure set
- ✓ Certified metric definitions with clear ownership
- ✓ Data governance in place before go-live
- ✓ Architecture decisions that avoid costly rework
