Client need

New hospitals have a rare opportunity to design safety, quality and patient experience into their structures, processes and culture before opening, but they also risk launching without mature systems in place. Leaders must stand up governance, metrics, policies and training on a compressed timeline.

Requests typically come from owners, developers and executive teams of greenfield hospital projects preparing for opening and accreditation.

Questions we help you answer

- How do we build safety and quality into a new hospital from day one?
- What governance, metrics and policies should be in place before we open?
- How do we prepare for accreditation alongside opening?

What you receive

- SQPE Advisory Guide for greenfield hospitals
- Recommended SQPE governance structure and committee design
- Priority SQPE metrics and data processes to establish before opening
- Readiness roadmap aligned to opening and accreditation milestones
- Recommended SQPE training and education plan

How it works

Cleveland Clinic SQPE experts guide hospital leadership through the advisory guide in virtual working sessions, with on-site visits at key milestones before opening.

Support runs through the pre-opening period, timed to design, construction and accreditation milestones, with optional support continuing into the first year of operations.

Expected outcomes

- ✓ SQPE foundations in place at opening
- ✓ Governance, metrics and policies aligned with Cleveland Clinic practice
- ✓ Readiness for accreditation and regulatory review
- ✓ A clear path to SQPE maturity in the first years of operation
