Finance

Financial Performance Improvement & Profitability

An advisory offering that shows leaders where margin is being lost, sizes the opportunities to recover it, and builds the cost foundations to see profitability by service line.

Category
Finance Advisory: Measure and Optimize Stages (understanding performance and improving margin)

Delivery model
On-site, Hybrid, Workshop-based

Client need

Rising labor, supply and operating costs squeeze margins, and many organizations lack the benchmarks or cost accounting to see which services make or lose money. It spans the Measure and Optimize stages of Cleveland Clinic's five-stage finance advisory lifecycle: understanding performance and improving margin.

Questions we help you answer

- Where are we losing margin, and why?
- How do our costs and productivity compare with our peers?
- Which service lines make money, and which lose it?

What you receive

The first three form the diagnostic; the last is the extended scope:

- **Assessment and benchmarking:** key performance indicators, drivers of results and peer comparison
- **Cost and revenue opportunities:** quantified and ranked by value and ease
- **Improvement roadmap:** actions with owners, timing and estimated impact
- **Cost accounting and service line profitability:** allocation rules and margin by service line

How it works

1. **Discovery:** data request and leader interviews
2. **Analysis and benchmarking:** opportunities sized, reviewed weekly
3. **Validation and readout:** roadmap validated and presented
4. **Extended scope build:** cost rules and profitability model

Expected outcomes

- ✓ Leadership sees where margin is lost and why
- ✓ Ranked opportunities, each with an owner, achievable without compromising care
- ✓ True margin by service line to guide investment
