Digital Tools & Analytics

Digital Patient Experience

Design a seamless digital patient journey aligned to your clinical pathways, from first contact to follow-up.

Category
Digital & Technology Advisory

Delivery model
Virtual, Hybrid, Workshop-based

Client need

Patients increasingly expect to book, communicate, prepare for care and follow up digitally, yet many hospitals deploy patient apps and portals that are disconnected from clinical pathways and workflows. Patients may also rely on insecure consumer channels. Requests typically come from the CEO, Chief Experience Officer, CMIO or marketing and access leaders, triggered by a new hospital opening, a patient app launch or low digital engagement.

Questions we help you answer

- What digital experience should our patients have, from first contact to follow-up?
- Which apps, portals and digital tools should we offer, and in what order?
- How do we tie digital journeys to our clinical pathways?

What you receive

- Patient journey maps aligned to priority clinical pathways
- Digital front door and patient app recommendations
- Pathway digitization opportunities (pre-visit, in-hospital, post-discharge)
- Patient engagement, education and secure communication recommendations

How it works

Virtual journey-mapping and best-practice sessions with Cleveland Clinic patient experience and digital experts, review of the client's pathways and digital tools, and written recommendations. An optional in-person patient experience immersion at Cleveland Clinic.

Phase 1 Pathway and current-state review; Phase 2 Journey mapping and design sessions; Phase 3 Recommendations and readout.

Expected outcomes

- ✓ Digital patient journeys aligned to clinical pathways
- ✓ Higher patient digital adoption and engagement
- ✓ Shift from insecure channels to secure digital communication
- ✓ Clear roadmap for digital patient experience improvements
