Safety, Quality, and Patient Experience (SQPE)

CC Connected SQPE Core Program

A structured, year-round safety, quality and patient experience program that benchmarks your organization against Cleveland Clinic standards and keeps improvement on track.

Category
Clinical Advisory

Delivery model
On-site, Hybrid

Client need

Hospitals joining a clinical affiliation need more than a one-time review: a shared baseline, reliable metric definitions and a regular cadence that keeps SQPE priorities visible. This program is the foundation required of all Cleveland Clinic Connected members, typically sponsored by the CEO, CMO or CNO.

Questions we help you answer

- How do our safety, quality and patient experience compare with Cleveland Clinic standards?
- Which measures should we prioritize, and how do we track them reliably?
- Are we improving year over year?

What you receive

- Initial on-site organizational SQPE assessment and written report
- Review of priority SQPE metric definitions with the member team
- Data collection and quarterly metric performance submission process
- Quarterly SQPE review meetings with Cleveland Clinic experts
- Annual SQPE reassessment and written report with updated recommendations

How it works

The program begins with an on-site assessment by the Cleveland Clinic SQPE team, followed by quarterly review meetings built around the member's submitted metric data. An annual reassessment measures progress and resets priorities for the following year.

Initial on-site assessment early in the first membership year; quarterly reviews throughout the year; annual assessment and report at the close of each membership year.

Expected outcomes

- ✓ A documented SQPE baseline compared with Cleveland Clinic standards
- ✓ Standardized definitions and reliable quarterly data for priority metrics
- ✓ A prioritized, year-over-year improvement plan
- ✓ Measurable progress on the 3 to 5 priority measures each member selects, against targets the member sets
